# **Public Health and Medical Situation Report**

## **California Department of Public Health (CDPH) and Emergency Medical Services Authority (EMSA)**

On 10/09/17, Governor Brown issued an emergency proclamation for Butte, Lake, Mendocino, Nevada, Napa, Orange, Sonoma, Yuba and Solano counties after wildfires damaged infrastructure, threatened homes and spurred evacuations. On 10/10/17, The State of California received a Major Disaster Declaration from the President Trump and on 10/13/17, Individual Assistance was authorized for individuals and families in Napa and Sonoma Counties who have suffered losses due to the fires; on 10/14/17, the same assistance was approved for Butte, Lake, Mendocino and Yuba Counties. As consequences of the wildfires, Eric D. Hargan, Acting Secretary of the U.S. Department of Health and Human Services, has determined that a public health emergency exists and has existed since 10/08/17. The California Governor's Office of Emergency Services (Cal OES) State Operations Center (SOC) and the Medical and Health Coordination Center (MHCC) remain activated in response to the statewide wildfires. Multiple healthcare and developmental facilities remain evacuated across the state and CDPH Licensing and Certification Program (L&C) is monitoring and updating the Facility Status Report (FSR). CDPH L&C has been coordinating with Office of Statewide Health Planning and Development (OSHPD) on reopening of evacuated hospitals and health facilities.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

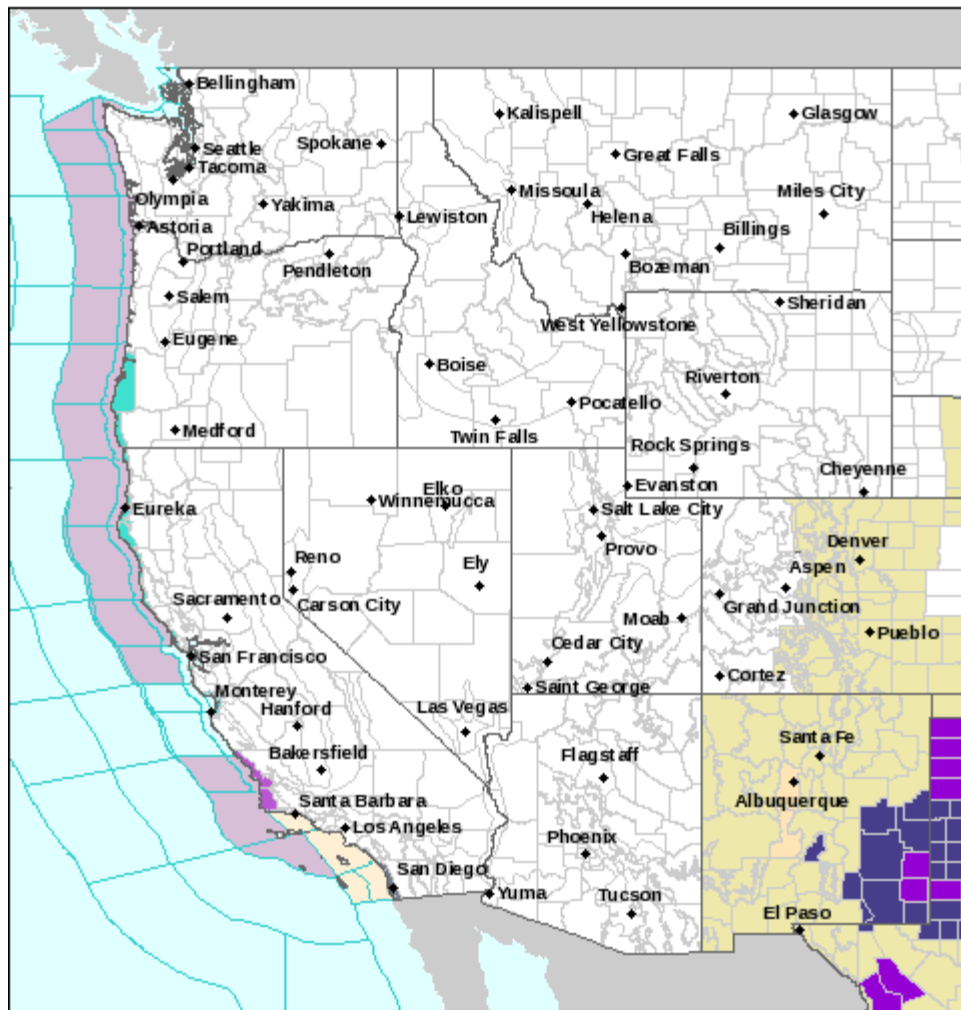

High pressure will govern the weather pattern over the region through the middle of next week before we see much of a weather pattern change. Confidence is beginning to grow that we will see a wet pattern develop and move across the region late next week and weekend. In the meantime, dry weather will continue with a slow cooling trend for afternoon high temperatures lowering a few degrees daily from 15-20 degrees above normal for a few more days to very near normal temperatures next Thursday. Winds will be rather light for most areas into next week. However, tonight into Saturday morning some light to locally moderate and a bit gusty N to E winds are expected again in the northern Sacramento Valley and western foothills (strongest gusts 20-25 mph) and along the western slopes and drainages of the Cascades and Sierra (strongest gusts 25-35 mph). These winds will help keep overnight relative humidity (RH) somewhat lower and temperatures a little warmer than if conditions were calm there. Afternoon low RH values will generally be 10-25%. The poorest overnight RH recoveries will be 20-40% in the breezy locations and some mid and upper slope locations. RH, especially overnight recovery, is likely to begin showing marked increases late next week even if precipitation doesn't develop. A shallow marine layer and light onshore flow will provide for higher RH and some periods of fog or low clouds along the immediate coast, especially north of Cape Mendocino for the next few days then for more coastal areas after that.

## **SOUTHERN CALIFORNIA**

A trough moving through the Rocky Mountains will help initiate some weak offshore flow over the region during the next couple of days, but the main weather story will be the continued very warm and dry conditions through Saturday. Daytime highs will be in the 70s to mid-80s in the mountains with 80s to mid-90s in the valleys. Minimum humidity will be in the teens. Local northeast to east winds of 8 to 18 mph can be expected across the coastal mountain and valley areas of Southern California during the morning hours both today and Saturday. Also, northerly winds of 15 to 30 mph, along with higher gusts, will be common across the Mojave Desert eastward to the Colorado River today with diminishing winds on Saturday. Cooler weather is anticipated Sunday and Monday as a weak upper low is forecast to move through the state. The more noticeable cooling from this system will occur on Monday as onshore flow increases and the marine layer becomes more influential across the coastal region. Daytime highs by Monday will be 10-15 degrees lower than today. After high pressure briefly returns next Wednesday, the overall synoptic-scale pattern may be shifting towards a cooler, and a potentially wetter one by next weekend.
